

B. Further Reading Hub (Copy & Guidelines)

1. "GDPR: General Data Protection Regulation for Freelancers" (Trust Manual)

How to Handle Client Data & User Research Safely:

Anonymize User Testing Data: When publishing UI/UX case studies or user research results, ensure all real user names, emails, financial records, and medical data are completely redacted or replaced with dummy placeholder data.

Secure Asset Storage: Store client Figma files, NDA-covered wireframes, and design assets on encrypted cloud drives with restricted access links.

Explicit Consent: Always obtain written client permission before featuring proprietary dashboard designs, client logos, or metrics in your public portfolio.

2. "The Inclusive Storefront Guide" (WCAG 2.1 Summary)

Adding Alt-Text & Contrast Standards to Digital Profiles:

Alt-Text for Design Samples: Add descriptive alternative text to all visual portfolio uploads (e.g., *Alt: Mobile app UI layout showing a 2-step bank transfer screen with high-contrast buttons and clean typography*).

WCAG Color Contrast: Ensure all UI mockups, text elements, and buttons maintain a minimum **4.5:1 contrast ratio** for standard text and **3:1** for large graphics.

Clear Screen Hierarchy: Organize visual case studies with clear heading tags (H1, H2, H3) and clean visual paths so screen readers and users can easily navigate your design workflow.
