

Professional Operating System Playbook

Section 1: Service & Positioning

- **What I Do:** I design and build end-to-end user experience (UI/UX) architectures and interactive product prototypes.
- **Who I Serve:** Early-stage health-tech startups and digital polyclinics across Nigeria seeking to streamline patient onboarding and clinical web applications.
- **What Problem I Solve:** I solve low user retention and high onboarding bounce rates by converting complex clinical workflows into intuitive, human-centered digital interfaces.
- **Positioning Statement:** "I help early-stage health-tech startups simplify complex clinical workflows into intuitive web and mobile interfaces so they can boost patient retention and scale recurring revenue without long development delays."

Section 2: Client & Project System

[1. Onboarding] —▶ [2. Scope Definition] —▶ [3. Project Delivery] —▶ [4. Closeout & Offboarding]

- 1. Onboarding:** Send a 3-minute structured intake form, conduct a 20-minute alignment call, and execute a formal service contract along with a 40% upfront deposit invoice.
- 2. Scope Definition:** Issue a Scope of Work (SOW) detailing exact screen counts, high-fidelity Figma deliverables, responsive breakpoints, user testing protocols, and a 2-round revision cap.
- 3. Project Delivery:** Execute design sprints across 4 weeks (Research/Wireframes → High-Fidelity UI → Interactive Prototype) supported by weekly status updates sent every Friday.
- 4. Closeout:** Deliver final design system tokens, Figma production files, and developer handoff documentation; issue final invoice and conduct an offboarding feedback session.

Section 3: Ecosystem Strategy

Flash Team Candidates

- **Full-Stack Developer (React/Node):** Partner on end-to-end design and code implementations for clients requiring full software builds.
- **Clinical Data Specialist:** Collaborate on specialized healthcare data modeling, patient schema design, and regulatory compliance checks.
- **Brand/Copy Strategist:** Enlist for microcopy, patient UX writing, and brand identity alignment within UI designs.

Strategic Alliances

- **Health-Tech Incubators & Accelerators:** Establish non-exclusive referral agreements to provide UX audits for early-stage portfolio startups.
- **IT Infrastructure Consultants:** Partner with local hospital network engineers to handle software UI layer design while they manage hardware and SOHO network setups.

Section 4: Operational Systems (Company of One)

Operational System	Mechanics & Implementation	Core Benefit
Client Onboarding System	Automated intake questionnaire linked to an inline scheduling booking calendar and standard agreement contract.	Eliminates unpaid discovery meetings and sets immediate boundaries.
Project Workflow System	Standardized 4-week Figma design template containing reusable components, accessibility tokens, and handoff checklists.	Reduces design delivery time by 30% and prevents missed technical specs.
Payments & Risk System	40/30/30 milestone billing model paired with a 5-day grace period, 1.5% weekly late penalty, and mandatory scope creep change orders.	Secures positive cash flow and eliminates unpaid rework.

Section 5: Growth Strategy

- **Current Core Offer:** Full UI/UX Product Design Sprint — A 4-week end-to-end design package delivering complete screen layouts, responsive interactive prototypes, and developer handoff assets.
- **30-Day MVP Test Idea:** 5-Minute UX Onboarding Friction Audit — A rapid mini-offer where early-stage health-tech founders receive a personalized video audit pin-pointing friction in their current sign-up flow, converting into full design sprints.

Section 6: Professional Standards

- **Scope Creep & Boundaries:** No out-of-scope design work is executed without a signed written Change Order and an updated cost estimate.

- **Data Privacy & Confidentiality:** All patient health information (PHI), clinical wireframes, and proprietary client workflows remain strictly confidential under non-disclosure protocols.
- **Communication Integrity:** Issue transparent project status updates every Friday; notify clients of any schedule variances at least 48 hours prior to milestone deadlines.
- **Conflict Resolution:** Resolve client disputes through objective review against the original signed SOW deliverables list.

Section 7: 30-Day Action Plan

Week 1: Foundations & System Setup

- Lock in finalized service positioning statement and email intake signature templates.
- Build standardized Figma UI Component & Developer Handoff Starter Kit.
- Contact 1 developer candidate to establish initial Flash Team alignment.

Week 2: Strategic Outreach & Workflow Standardization

- Reach out to 2 local health-tech incubators/accelerators for strategic referral partnerships.
- Finalize standard Scope of Work (SOW) template and Payment Policy agreement.
- Send out 1 structured project proposal using the updated onboarding framework.

Week 3: MVP Testing & System Optimization

- Test 30-day MVP idea by sending 5 mini UX Audit videos to prospective health-tech founders.
- Gather feedback on communication templates from active clients and adjust response schedules.

Week 4: Review, Refine & Scale

- Review conversion results from MVP video audits and refine sales pitch messaging.
- Audit operational capacity, optimize Figma design workflow templates, and establish Month 2 revenue targets.
