

1-Page Business Idea Validation Sheet

1. MARKET OPPORTUNITY

- **Problem Identification:** Early-stage digital health startups in Nigeria struggle with low user retention because their app interfaces are complex, technical, and unintuitive, which leads to high onboarding drop-offs, user frustration, and loss of recurring revenue.
- **Who is Affected:** Founders, product managers, and end-users of early-stage digital health startups.
- **Why it Matters:** Poor user experience directly causes users to abandon health apps before completing vital onboardings or consultations, undermining the startup's core business model.

2. BUSINESS MODEL (Simplified)

- **Customer:** Early-stage health-tech startups, digital clinic platforms, and tele-medicine companies in Nigeria seeking UI/UX design refinement.
- **Value:** Delivering user-centered design audits, rapid interactive wireframing, and streamlined onboarding UI to double user conversion and retention.
- **Revenue:** Fixed project fees for full MVP UI/UX redesign sprints (e.g., ₦450,000 per project) and ongoing monthly UX retainer packages for feature updates.

3. VALUE PROPOSITION

- **Value Statement:** "We help early-stage health-tech startups who struggle with complex user workflows and high drop-off rates to achieve seamless onboarding experiences and higher user retention by building human-centered, data-informed UI/UX product designs."
- **Differentiation:** Unlike generic graphic designers, we specialize exclusively in clinical/health-tech user flows, combining rapid Figma prototyping with data-backed usability testing.

4. MVP (TEST PLAN)

- **Simplest Version (MVP):** A free 5-minute "UX Audit & Conversion Friction Report" delivered via a personalized Loom video review analyzing a startup's current app onboarding screens.
- **Testing Plan:** Direct message 10 health-tech startup founders on LinkedIn/Twitter; pitch them a free friction audit of their existing sign-up flow.
- **Success Metric:** At least 3 out of 10 founders request a paid discovery call to discuss a full UI/UX redesign sprint.

5. PIVOT DECISION

- **Potential Feedback:** Founders acknowledge UX issues but report budget constraints for a full redesign sprint.

- **What is Not Working:** Pitching a high-ticket, full UI/UX overhaul package upfront to pre-revenue startups.
- **Planned Pivot:** Shift offering from a full end-to-end redesign to a modular, lower-tier "3-Day Onboarding UI Sprint" focused strictly on fixing the sign-up funnel at a lower price point.
