

AI for Budgeting — Worksheet

Use this worksheet after reading the Module 6.5 guide. Fill it in with your real numbers — not estimates. The more honest your inputs, the more useful your budget will be.

Question 1 — Calculate Your Average Monthly Income

Example: Jan – \$300,000 | Feb – \$180,000 | Mar – \$420,000. Average = \$300,000. I will budget as if I earn \$300,000 every month.

10% Investment:	
10% Emergency Fund:	
10% Personal / Lifestyle:	

Question 3 — Set a Savings Target Using AI

Example: I want to save ■1,000,000 in 12 months. That means ■83,333 / month (28% of my ■300,000 average). I asked AI if this is realistic and it suggested stretching to 18 months to keep my plan sustainable.

Question 4 — Plan for a High-Income Month

Example: If I earn \$600,000 this month (double my average), I will: put \$100,000 into emergency fund, invest \$100,000, save \$50,000 extra, and allow myself \$50,000 for lifestyle. The rest goes toward next month's commitments.

If I earn double my average, I will allocate the extra...

Question 5 — Plan for a Slow Month

Example: If income drops to \$120,000, I will pause discretionary spending, draw from my emergency fund only for non-negotiables, and not touch my savings or investments.

If my income drops below my average, I will...

Question 6 — Your AI Tool & Commitment

Example: I will use ChatGPT every 1st of the month to review my budget and adjust based on last month's actual income.

The AI tool I will use:

☐ ChatGPT
 ☐ Notion AI
 ☐ Google Sheets + AI
 ☐ Excel Copilot
 ☐ Other

I will review my budget on this date each month:
