

Guide on using Whatsapp

To keep quality high without a dedicated project manager, you need to turn your chat into a structured workspace.

1. Use "Pinned" Messages for the Essentials

Don't let your partner dig through a week of "Good mornings" to find the project brief.

The Hub: Create a "Project Info" message containing the Google Drive link, brand guidelines, or main goals.

The Action: Long-press and Pin this message to the top of the chat (or keep it in the Group Description if you are using a Group).

2. Implement a "Status Code" System

Since WhatsApp lacks "Status" buttons (like In Progress or Done), use emojis to signal quality at a glance:

🟡 Yellow Circle: Drafting/In progress.

🟦 Blue Circle: Ready for your review (Quality Check).

✅ Checkmark: Approved and finished.

Rule: Every time your partner starts or finishes a task, they must send a message with the corresponding emoji.

3. The "Reply" & "Star" Method for Feedback

To keep quality high, your feedback must be specific and easy to find.

Specific Feedback: Always use the Swipe-to-Reply feature on the specific image, document, or text you are critiquing. This prevents "Which part are you talking about?" confusion.

Starring Requirements: When you give a specific instruction (e.g., "Always use size 14 font for headers"), tell your partner to "Star" that message. It acts as their personal quality checklist they can reference later via Starred Messages.

4. Weekly "Voice Note" Retrospectives

Text is great for facts; voice is better for nuance and quality expectations.

Once a week, send a 2-minute voice note.

Structure: Highlight one thing they did great (reinforce quality) and one specific area to tighten up for the coming week.

Listening to your tone helps a partner understand the standard you're looking for better than a cold text.

5. Use WhatsApp Web for File Management

If you are the one reviewing work, use WhatsApp Web on your computer.

It allows you to download files easily and view them on a large screen to spot errors that you'd miss on a phone.

Use the "Search" bar to quickly find past instructions by searching for keywords like "Logo" or "Deadline."
